Surfaice.pro is an AI co-pilot for construction development

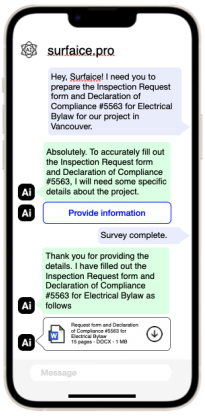

We are focusing on the **highly repetitive and prototypical** projects by bringing AI to streamline process and guideline adoption throughout the development life cycle

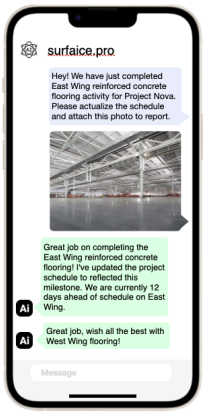

Surfaice.pro focus on:

- **Inefficient communication and collaboration**, leading to 20% longer project duration to finish than originally scheduled.
- **Limited data utilization** can hinder informed decision-making. Construction industry uses less than 1% of project data for analytics and decision support.
- **Slow digital adoption** can lead to increased costs and reduced project efficiency, with only 50% of construction professionals believing their companies are making sufficient progress in adopting digital technologies.
- **Lack of standardization** contributes to inefficiencies and increased project costs.

We **standardize your guidelines, processes and playbooks** and provide you with co-pilot to quickly navigate through myriad data to make informed and timely decisions.
