

Protecting Workers from Outdoor Pollution

California

SCENARIO

During the California wildfires, a warehouse group wanted to ensure healthy working conditions within and outside its facilities and to ensure that the air quality complied with OSHA and state wildfire regulations.

SOLUTION

SGS Galson installed more than 100 SmartSense™ units with particle measurement sensors across more than fifty facilities, equipped with a color-coordinated warning system and text/email alerts.

RESULT

The warehouse group was able to demonstrate safe working conditions at its facilities, minimizing employee concerns, disruption, and potential business losses of hundreds of thousands of dollars per hour.

The company continues to use SmartSense™ units to monitor its California facilities and has expanded the sensor project to facilities in other locations that experience wildfires.
